Both RIEGL 2D and 3D laser scanners are ideally suited for mobile mapping applications. In order to register scan data acquired from moving platforms, such as boats, trains, road and off-road vehicles, the laser scanner is supplemented by position and attitude sensors, for example GPS (Global Positioning System) and IMU (Inertial Measurement Unit).

First of all, let's be clear that 3D laser scanning is not magical. True, the technologies that make it possible are very advanced and quite amazing. But behind the mirrors—found in the laser probe (without any smoke)—there is a lot of know-how and experience that makes the laser scanning experience seem so easy to Laser Design customers.
