About These Tables While preparing these tables, the following modifications were made: The nomenclature is different, and so is the tabular format. Density ( $\rho$ )is not tabulated, only specific volume ( $v$ )is tabulated. Values of thermal (internal) energy ( $u = h - pv$ )are computed and tabu-lated. Please note: The tabulation is restricted to 1000

Saturated Steam Tables - Metric Units. Saturated steam is steam that is in equilibrium with heated water at the same pressure, i.e., it has not been heated past the boiling point for that pressure.. If saturated steam is reduced in temperature (while retaining its pressure) it will condense to produce water droplets, even if it is still considerably above the boiling point of 100°C at ...
